

NEED A MOBILE PLATFORM RECOMMENDATION?

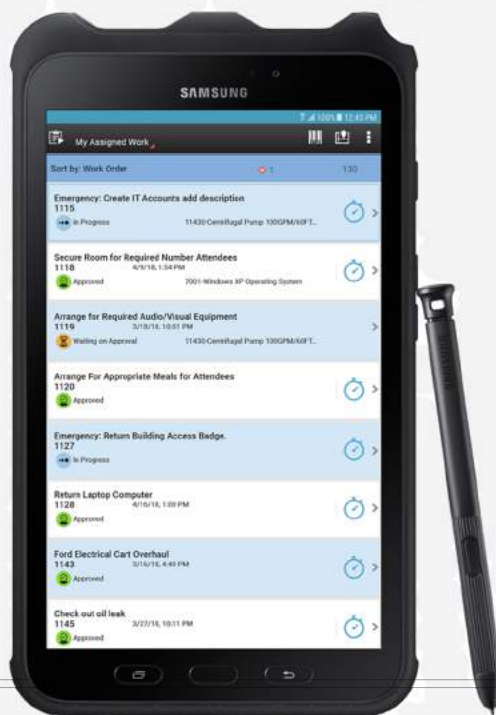

Samsung has changed the game in mobility for the Maximo enabled workforce. While there have always been “ruggedized” tablets available or cases to protect your fragile I-pad, these devices were either price prohibited for roll-out or the cases too bulky for real industrial work environments.

Samsung’s **Tab Active 2** is a ruggedized tablet, purpose built to handle the rigors of the maintenance world. It is MIL-SRS-810G and IP68 certified – so it is tough enough to withstand drops, shocks and outdoor environments – rain or shine.

KEY FEATURES OF THE SAMSUNG TAB ACTIVE 2

Long Lasting and Replaceable Battery – battery life has up to 11 hours, more than enough for the typical shift – but battery replaceable if you are working overtime.

Biometric Authentication – Fingerprint scanner offers enhanced security while facial recognition lets users unlock the device while wearing gloves.

High – Resolution Camera – add detailed field reports and record high resolution video with the 8MP AF back camera and 5MP front camera.

Enhanced Touch - with a wet touch mode for inclement weather and a glove mode for cold weather or clinical environments.

IP68 – Certified S Pen - allows you to write in the pouring rain or while wearing gloves.

WHAT DOES THIS MEAN FOR MAXIMO CUSTOMERS?

IBM and Samsung have worked closely to optimize Maximo Anywhere to take advantage of the capabilities of the TAB Active 2. The maintenance grade build, price point, and longevity of the Tab Active 2, combined with the tuned Anywhere Capabilities, offers a platform that is far superior to anything else in the market.
